

Woodpecker dot to dot

Complete the dot to dot to reveal the woodpecker.

Don't forget to colour your it in after you've finished.

Did you know?

Woodpeckers get their name from how they find their food. They peck at trees with their strong beak to find insects that live inside.

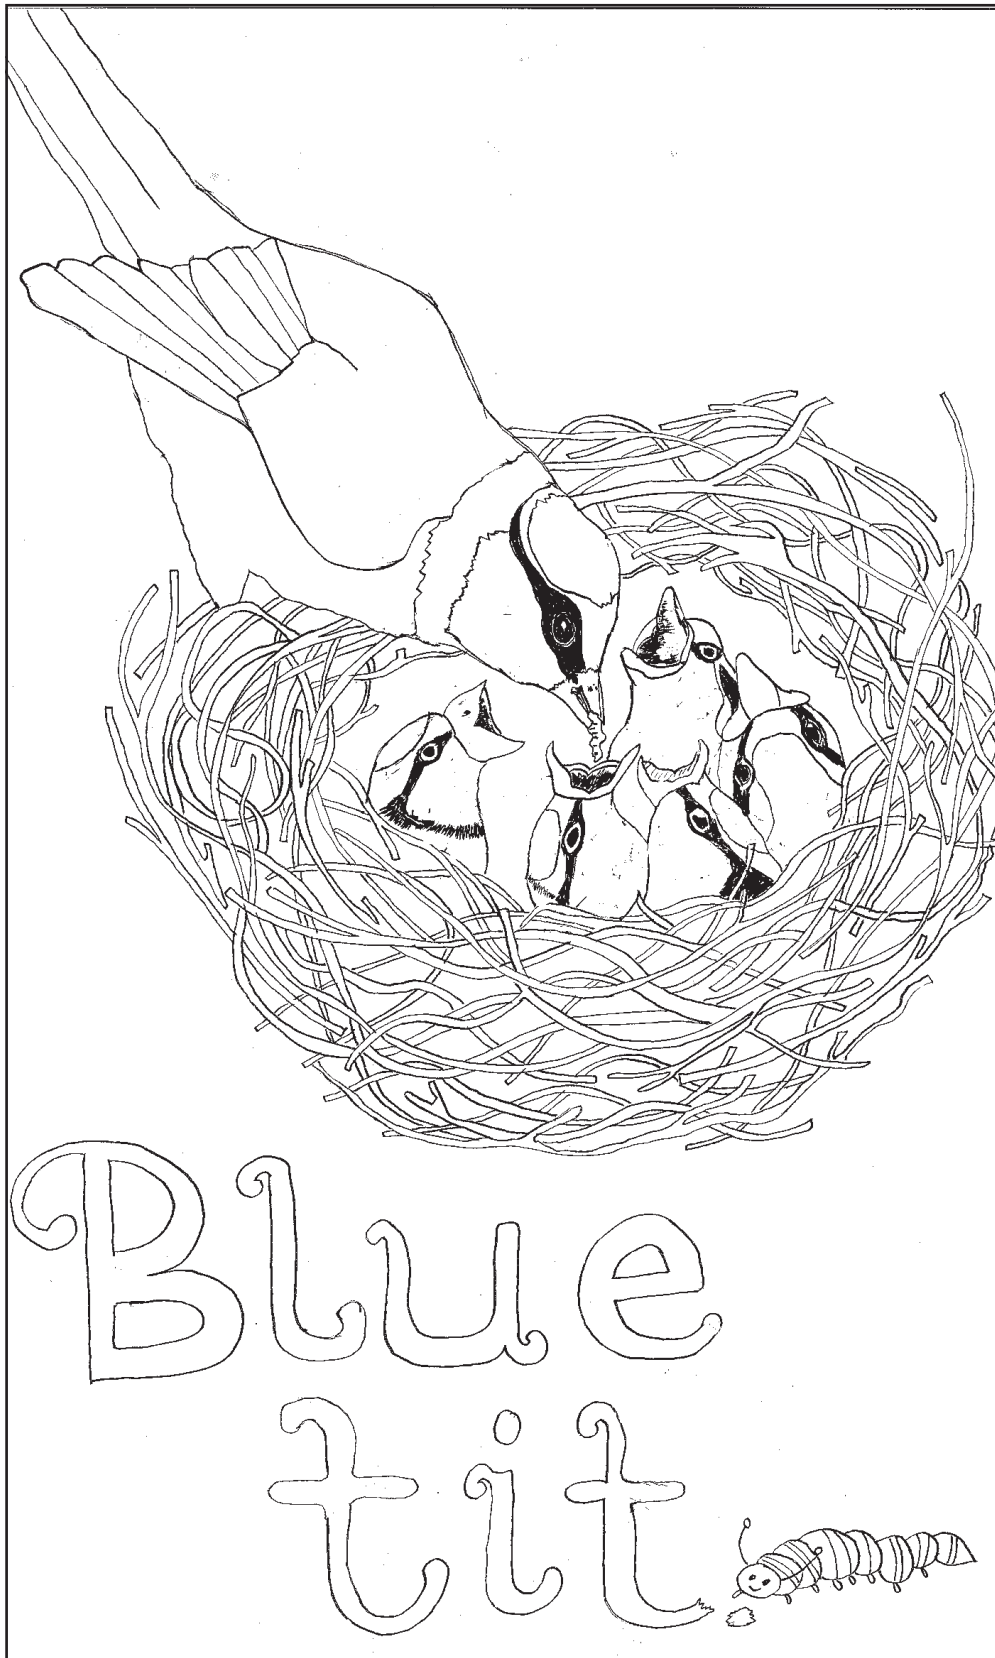

They often live in woodlands where there are lots of trees, have you seen any at Yeovil Country Park?

They have a tongue which is 4 inches long with a glue like substance on it to help catch insects.

Woodpeckers help trees by eating the insect pests.

Blue tit colouring in

Learn about the birds which live in our parks and colour them in.

Did you know?

Blue tits do not migrate, they live in our woodlands, parks and even gardens all year round, even in the winter.

They often live in holes, nests or bird boxes in trees.

98% of household have seen a blue tit in their garden during the winter, have you?.

Blue birds are known for their vibrant blue, yellow and white feathers. But did you know that males and older birds have brighter feathers.
